

Volunteer Energy is a full-service energy provider, serving various businesses and industries by providing business energy solutions and assuring competitive and consistent pricing for its customers throughout the Ohio, Michigan and Pennsylvania regions. With a rapidly expanding staff, Volunteer Energy was in need of a larger corporate headquarters that would have room for current staff and future growth expectations.

Creative Architectural Solutions was contacted to design and oversee development of a new custom office space for the private energy brokerage firm. The company managed to fill its facility in under two years, exceeding all expectations and is in the planning stages of adding to the current building.
